

The plan, and how I would build it

One marketing engine, built once and run at every operating company.

The engine

INTEGRATION HubSpot through MCP; nothing writes without review

BUILT WITH TriFlow's AI platform engineer, on the platform's standards

REPEATABLE Same engine and site standard at every operating company

Data goes in once. Everything after that runs inside HubSpot: workflows and sequences do the work, agents draft, owners approve.

LAYER 1 OF 4 · DISCOVERY AND DIAGNOSIS

The intake tool

Data in from wherever it lives; records and properties out, reviewed before import.

LAYER ONE - DISCOVERY AND DIAGNOSIS

Acquisition intake · Operating company 01

CONCEPT VIEW

6 sources loaded

3,412 rows read

1,140 assets identified

5 figures that do not reconcile

2 questions out to the company

0 writes to the CRM without review

SOURCES IN

Spreadsheets and exports

Financials, job log, maintenance list, quote history

4 files

Documents

Agreements, performance reports, proposals

248 pages

Email and correspondence

Inbound inquiries, engineer threads

1 mailbox

Discovery interviews

The president and the salesperson: last ten wins and losses

2 sessions

+ Add a source

RULES APPLIED

Every property has a source

No value is imported that cannot be traced to a file, a page or a person

Interview notes stay unverified

Saved as a note on the record, never as a property value

RECONCILIATION: FIGURES THAT DO NOT SIT TOGETHER

Finding	Sources	Status
28 new customers last year cannot sit next to 76 since 2023 and 164 in eight years	Exhibit 6, Exhibit 4, Exhibit 2	FLAGGED
299 crew-weeks of work against 220 available; gap equals the subcontracted revenue if it is Restoration	Exhibit 5, job log	CONFIRMED BY COMPANY
Two-thirds of agreement records have no expiry date; 41 known renewals is a floor	Maintenance list	FLAGGED
Every email open on government addresses clicks all links within seconds	Email tool export	EXCLUDED FROM METRICS
"Top decile" label: 190 is 4.4% of the 4,290 systems scored	Exhibit 8	QUESTION SENT

DIAGNOSIS DRAFT

Where growth comes from, the constraint, the three numbers to manage by

Draft 3 of 3 - proofed twice

Ready for review

NUMBERS TO MANAGE BY (PROPOSED)

Measure	Built from	Status
Gross profit per crew-week, with share of Restoration subcontracted	Job log, financials	READY
Maintenance assets under signed agreement; net enrollments per quarter	Asset object	READY
Introductions per quarter from customers and engineers	Source and Referred by	NEEDS FIELD

REVIEW QUEUE: PROPOSED RECORDS

1,140 Assets -- new Asset object

Restore date, status, contract or handshake, expiry, escalator, performance

Cited: 1,140 / 1,140

176 assets -- flag: handshake, no agreement

From maintenance list, cross-checked to invoices

Cited

8 consulting engineer firms -- Companies

102 assets associated, one firm with performance data

Cited

112 active + 52 lapsed customers -- Companies

First and last invoice date requested - Held: overlap question open

Discovery interview notes

Attached to 10 deals as notes

UNVERIFIED

Review diagnosis

Load to CRM: create new

Update existing

Hold for review (4)

Gate: nothing writes to the CRM until a named person approves the batch. Every field keeps its source after load.

IN

Any existing CRM data, spreadsheets, financials, correspondence, discovery interviews

ENGINE

Reconciles the figures, flags what does not add up, drafts the diagnosis. Every property has a source.

OUT

Reviewed records and properties into HubSpot: create, update, or hold. A named owner approves the import.

Concept view of the build, not a product screenshot. The pattern runs today on file-based inputs; this is what it looks like as a console.

TRIFLOW SOLUTIONS · DIRECTOR OF DIGITAL MARKETING AND SALES · 3 SEPTEMBER 2026

3

LAYER 2 OF 4 · LOAD INTO HUBSPOT

What the engine imports, and where it lives in HubSpot

HubSpot list prices, billed annually. The asset object is why Sales Hub is the Enterprise seat; the crew-week numbers are why Data Hub is on the list.

LAYER 3 OF 4 · EXECUTE

What the data says, and the plan in HubSpot

WHAT THE DATA SAYS

76%

of revenue is existing customers; 79% of new revenue came through referrals and engineers

Crews full

299 crew-weeks of work on 220. New demand is delivered by subcontractors at 15%

49%

of gross profit is Maintenance, and it is leaking: 176 handshakes, 480 never enrolled

So year one is built in the CRM, on the customers and the channel the company already has: four programs.

THE PLAN, IN HUBSPOT

PROGRAM 1

Referral and engineer program

HUBSPOT BUILD

Lead source and Referred by properties, project completion workflow, firms as Partner companies, introductions report

PROGRAM 2

The installed base

HUBSPOT BUILD

Asset custom object, signature and cross-sell sequences, renewal workflow

PROGRAM 3

Inbound and the pipeline

HUBSPOT BUILD

Routed form, SLA workflow, Closed lost stage, quote records, weighted forecast, the website

PROGRAM 4

The lead score and the prospects

HUBSPOT BUILD

Lead score from discovery interviews, two static lists, one sequence

New customers come from Programs 1 and 4 and a Q3 paid pilot, built and measured this year and turned up the day a sixth crew exists. Every new Restoration job before that is delivered at 15%.

This layer is where the automation lives: every workflow and sequence in the plan.

LAYER 3 OF 4 · EXECUTE

Program 1: the referral and engineer program

WHO THEY ARE	WORKFLOW TRIGGER	DELIVERABLES	OUTCOME
Every completed job the customer who just watched their well come back	Deal stage is any of: Complete Re-enroll when: Deal stage changes Fires the moment the project lead closes the job. WORKFLOW TRIGGER	A task for the project lead with a short referral ask drafted in their name, using the job's before-and-after numbers. The lead reads it, edits it, sends it. ENGINE DRAFTS LEAD APPROVES WORKFLOW TASKS	The project lead records the answer on the deal. Any name the customer gives becomes a company record with Lead source = Customer referral and a Referred by association to the customer. Report: introductions per quarter from customers. LEAD SOURCE ASSOCIATIONS DASHBOARD
The eight engineering firms consulting engineers who write the specifications; Partner companies, Evangelist contacts, associated to the assets they specified	Quarterly: first business day and: Company created where Lead source = engineer introduction The brief is on a schedule; the thank-you runs when a new introduction is created. WORKFLOW TRIGGER	A one-page quarterly brief for each firm: the projects they specified, our before-and-after results on each, anything new since last quarter. A thank-you within 48 hours of an introduction, and a results note when that project completes. No bounties, no fees, no gifts. ENGINE DRAFTS CLAUDE DESIGN YOU APPROVE SEQUENCE	Every deal a firm brings in gets Lead source = Engineer introduction and a Referred by association to the firm, labeled Specifying engineer. The assets they already brought us get the same, set retroactively from the project files. Report: introductions and revenue by firm, per quarter and all time. LEAD SOURCE ASSOCIATIONS DASHBOARD

PROJECT COMPLETION WORKFLOW the referral ask and the reference-permission ask to the project lead; the outcome note to the specifying engineer

LAYER 3 OF 4 · EXECUTE

Program 2: the installed base

WHO THEY ARE	WORKFLOW TRIGGER	DELIVERABLES	OUTCOME
Un-enrolled restored assets at active customers that get no maintenance from us	List: Asset maintenance status = None and Company status = Active Split at random into List A and List B The salesperson enrolls List A in the sequence once the performance pages are approved. List B is excluded from enrollment until month six. LAUNCH CRITERIA	One performance page per asset: before restoration, after, and what maintenance has held. The salesperson sends them in a sequence: an email with the pages, a call task, a second email, an offer to enroll. ENGINE DRAFTS CLAUDE DESIGN SALES APPROVES SEQUENCE	A reply or a meeting creates a deal. When the customer enrolls, the asset's Maintenance status property changes to Signed and the procurement stage is tracked on the deal. Report: assets enrolled, List A compared with List B at month six. DEALS DASHBOARD
Handshake on maintenance with no contract and no escalator	List: Asset maintenance status = Handshake Grouped by company The salesperson enrolls the list once the agreement and escalator terms are approved, from week four. LAUNCH CRITERIA	Their performance pages and a five-year agreement with the escalator, built as a HubSpot quote. The salesperson sends them in a sequence: an email, a call task, e-signature on the quote. ENGINE QUOTE AND E-SIGN SEQUENCE	When the quote is signed, a workflow changes the asset's Maintenance status property from Handshake to Signed and applies the escalator. If a quote is unsigned after 14 days, a workflow creates a follow-up task. Report: assets signed. WORKFLOW TASKS DASHBOARD

PROJECT COMPLETION WORKFLOW the asset record updated with the after readings; the performance page regenerates from the record

LAYER 3 OF 4 · EXECUTE

Program 2, continued: renewals and lapsed customers

WHO THEY ARE	WORKFLOW TRIGGER	DELIVERABLES	OUTCOME
Expiring agreements coming due; two-thirds have no expiry date on record, so week one puts one on every agreement	Agreement expiry date is less than 90 days from now Re-enroll: never; one run per agreement Runs whenever an agreement reaches the date, all year. WORKFLOW TRIGGER	A renewal packet: five years of results on their assets and the renewal agreement. The workflow creates a task for the salesperson at 90 days, sends two emails with the packet at 60, and creates a task for the president at 30. ENGINE E-SIGN WORKFLOW	When the renewal is signed, the Agreement expiry date property moves forward five years and the asset leaves the workflow. Report: renewals due and renewals closed. WORKFLOW DASHBOARD
Lapsed former customers nobody has called	List: Company status = Lapsed and Last activity date is more than 24 months ago You or the salesperson enroll the list once the contacts are refreshed; first half now, second half in Q3. LAUNCH CRITERIA	A short note with the performance pages for the assets we restored for them, sent as a sequence: two emails and a call task. ENGINE SEQUENCE	A reply creates a deal with the Lead source property set to Reactivated customer. Report: customers reactivated. DEALS LEAD SOURCE DASHBOARD

LAYER 3 OF 4 · EXECUTE

Program 3: inbound and the pipeline

WHO THEY ARE	WORKFLOW TRIGGER	DELIVERABLES	OUTCOME
Inbound inquiries anyone who calls, emails or fills the form	Contact created or: Form submission = Inquiry form or: Call logged, Direction = inbound Every inquiry becomes a contact record with an owner, a timestamp and a Lead source. WORKFLOW TRIGGER	A first reply drafted for the owner from the matched company and asset. A workflow assigns the owner by region and creates a task for the president if nothing is logged in 24 hours. ENGINE DRAFTS YOU APPROVE FORM WORKFLOW	Four required properties before a deal leaves the first stage: named system, decision-maker, stated problem, budget source. Report: response time under one business day; 95% of records with a Lead source. DEALS DASHBOARD
Deals and quotes everything in the pipeline, won or lost	Deal stage changes and: Every Monday, 7:00, the pipeline note People move deal stages; the pipeline note runs on a schedule. WORKFLOW TRIGGER	Every quote is a quote record. Every lost deal goes to Closed lost with a Loss reason property. Nothing is deleted. A Monday pipeline note: what moved, what stalled, why the weighted number changed. QUOTE REGISTER ENGINE DRAFTS YOU APPROVE	Deal stage probabilities set from the company's own history. Report: a weighted forecast finance can sign, next to committed and available crew-weeks. FORECAST DASHBOARD

LAYER 3 OF 4 · EXECUTE

Program 3, continued: the website and search

WHO THEY ARE	WORKFLOW TRIGGER	DELIVERABLES	OUTCOME
The website and search what brings inquiries in without paying for them	Monthly, owned by marketing Site fixes live by week 4 A maintenance cadence, not an automation. OWNER CADENCE	Analytics and Tag Manager, Search Console, the business profile, the broken links fixed. The authority articles refreshed under a living byline. A results page for every completed job, named with permission, anonymized without it. Links earned from the engineering firms, the water associations and the trade journals. WEBSITE ENGINE DRAFTS YOU APPROVE	Inquiries created with Lead source = Organic search, routed to an owner. Report: inquiries by source; clicks and rankings by page. LEAD SOURCE DASHBOARD

PROJECT COMPLETION WORKFLOW the results write-up on permission, anonymized without it; Lead source and Referred by checked before the record closes

LAYER 3 OF 4 · EXECUTE

Program 4: the lead score and the scored prospects

WHO THEY ARE	WORKFLOW TRIGGER	DELIVERABLES	OUTCOME
The scoring model the company's model picked 190 of 4,290 systems; it was fit to existing customers, which is circular	Discovery interviews complete and: Deficiency properties imported on every system with a finding on record Built in weeks two to eight, before anything is sent. LAUNCH CRITERIA	A HubSpot lead score built the way I build them: interviews with the president and the salesperson on what a good prospect looks like, turned into named criteria and weighted with the imported properties: deficiency severity and age, system size, licensed state, an engineer relationship. Then engagement: replies, meetings, site visits. LEAD SCORE ENGINE YOU APPROVE	Every system with a finding on record is rescored. The company's 190 is the starting point, not the answer. Report: meetings and site visits by score band, the first calibration data the company has had. LEAD SCORE DASHBOARD
The scored prospects water systems with a recorded deficiency, never customers; company records with Deficiency finding, Finding date and Source properties	Static list: Prospects, List A (March) Static list: Prospects, List B (September) Enroll in sequence when: Page status = Approved Half in March, half in September, so the second half is a clean comparison. LAUNCH CRITERIA	One page per system: their own inspection finding and what a comparable system got after restoration. You send it in a sequence: an email about their well, a call task if they open it, a second email, an engineer introduction where one of our firms already works there, a closing email. ENGINE DRAFTS CLAUDE DESIGN YOU APPROVE SEQUENCE STATIC LISTS	A reply or a booked meeting creates a deal with the Lead source property set to Outbound. Site visit is a deal stage; a quote is a quote record. Report: meetings, site visits and quotes, List A compared with List B, at month nine. DEALS LEAD SOURCE DASHBOARD

LAYER 4 OF 4 · AGENTS DRAFT, PEOPLE APPROVE

Agent rules, and the three numbers on the dashboard

WHAT THE AGENTS MAY NEVER DO

Approval on every send

An agent drafts; a named owner sends

Every property has a source

Or it is not imported

Everything logged

Every run, draft and approval, dated

Closed data sources

An agent cannot add a data source

No record updates without approval

Agents read; owners write

Public-utility rule

No incentives to public buyers or engineers

THE THREE NUMBERS ON THE DASHBOARD

Gross profit per crew-week

with the subcontracted share beside it

Assets under signed agreement

net enrollments per quarter

Introductions per quarter

by customer and by engineer firm

The rules are the ones I run today, written down with every ruling dated. The dashboard is a HubSpot report set plus one finance sheet; no new platform.

Budget, plan, projection

BUDGET: \$200K, EXCLUDING SALARY

Line	What it buys	Paid to	Year one
Committed			\$88K
HubSpot	Sales Hub Enterprise, 3 seats; Data Hub Professional; Marketing Starter; onboarding	HubSpot, list price, annual	\$20K
The engine	AI usage for intake, pages, briefs and agents. The build is in-house with the platform's AI engineer	Anthropic, usage-based	\$5K
Data extraction	Inspection findings from EPA and state records as properties; twenty years of before-and-after readings from PDF reports; the parents' portfolios; the lapsed contact refresh. The data is largely free; the labor is not	Engine extracts; a contractor reviews	\$23K
Contact and search tools	Named people at the scored systems; a Semrush or Ahrefs seat	Apollo-class tool, Semrush	\$6K
Content and website	Photography; a copywriter for results pages and the authority articles; site fixes, the routed form, hosting	Photographer, copywriter, web developer	\$17K
Paid pilot	Industrial and remediation buyers, Q3, stop rule at \$10K on cost per site visit	Google Ads	\$10K
Measurement	Analyst time and list administration for the comparisons	Contractor	\$7K
Held, released by the rules			\$112K
List B data and pilot	If List A clears the month-nine rule; if the pilot passes its stop rule		\$20K
Demand generation	The day a sixth crew exists, with the measurement already in place		\$92K

PLAN: THE FIRST NINETY DAYS

WEEK 1	Records. Lists frozen, Lead source required, expiry dates, quote records, routed form.
WEEKS 2 TO 4	Import and switch on. Assets imported, firms as Partner companies, project completion and renewal workflows live. Paid search stops.
WEEKS 5 TO 8	Sequences running. Signatures and cross-sell List A. Lead score built from the discovery interviews. Reports live. Week-eight check.
WEEKS 9 TO 13	Set up spring. Lapsed sequence, prospect pages, List A out in March. Sixth-crew model with finance.

PROJECTION: YEAR ONE

\$901K

revenue, almost all from customers and relationships the company already has

-\$34K

after displacement at the memo's full \$200K of spend; better at \$88K committed

\$152K a year

net from year two; about \$1.37M of gross profit over the five-year terms of the assets the cross-sell enrolls
